GHG Mitigation Policies

“Prime Minister Prayut Chan-o-cha expressed Thailand’s willingness to fight climate change, aiming to **reach carbon neutrality in 2050** and **net zero emissions by 2065.**”

“With the adequate, timely and equitable support, through technology transfer and cooperation and, most importantly, the availability of and access to ample green financing facilities, **Thailand can increase our Nationally determined contributions (NDC) to 40% and reach carbon neutrality in 2050.**”

National Plans

The 20-Year National Strategy
2018 – 2037

The 12th National Economic
and Social Development Plan
2017 – 2021

and Conservation of National
Environmental Quality 2017 – 2036

Climate Change Master Plan
(2015 – 2050)

Nationally Appropriate Mitigation
Action (NAMA)

Thailand's Nationally Determined
Contribution (NDC)

NDC Sectoral Action Plan for the
Energy Sector 2021 – 2030

The Second Updated Thailand's
Nationally Determined Contribution
(2nd Updated NDC)

Thailand's Long-Term Low
Greenhouse Gas Emission
Development Strategy (LT-LEDS)

Thailand's NDC Roadmap on Mitigation 2021–2030

Waste

- Waste reduction
- Municipal wastewater management
- Industrial wastewater management

Energy & Transport

- Increase power generation efficiency
- Energy efficiency in buildings/households
- Energy efficiency in transport
- Renewable energy generation
- Promote biofuels
- Etc.

IPPU

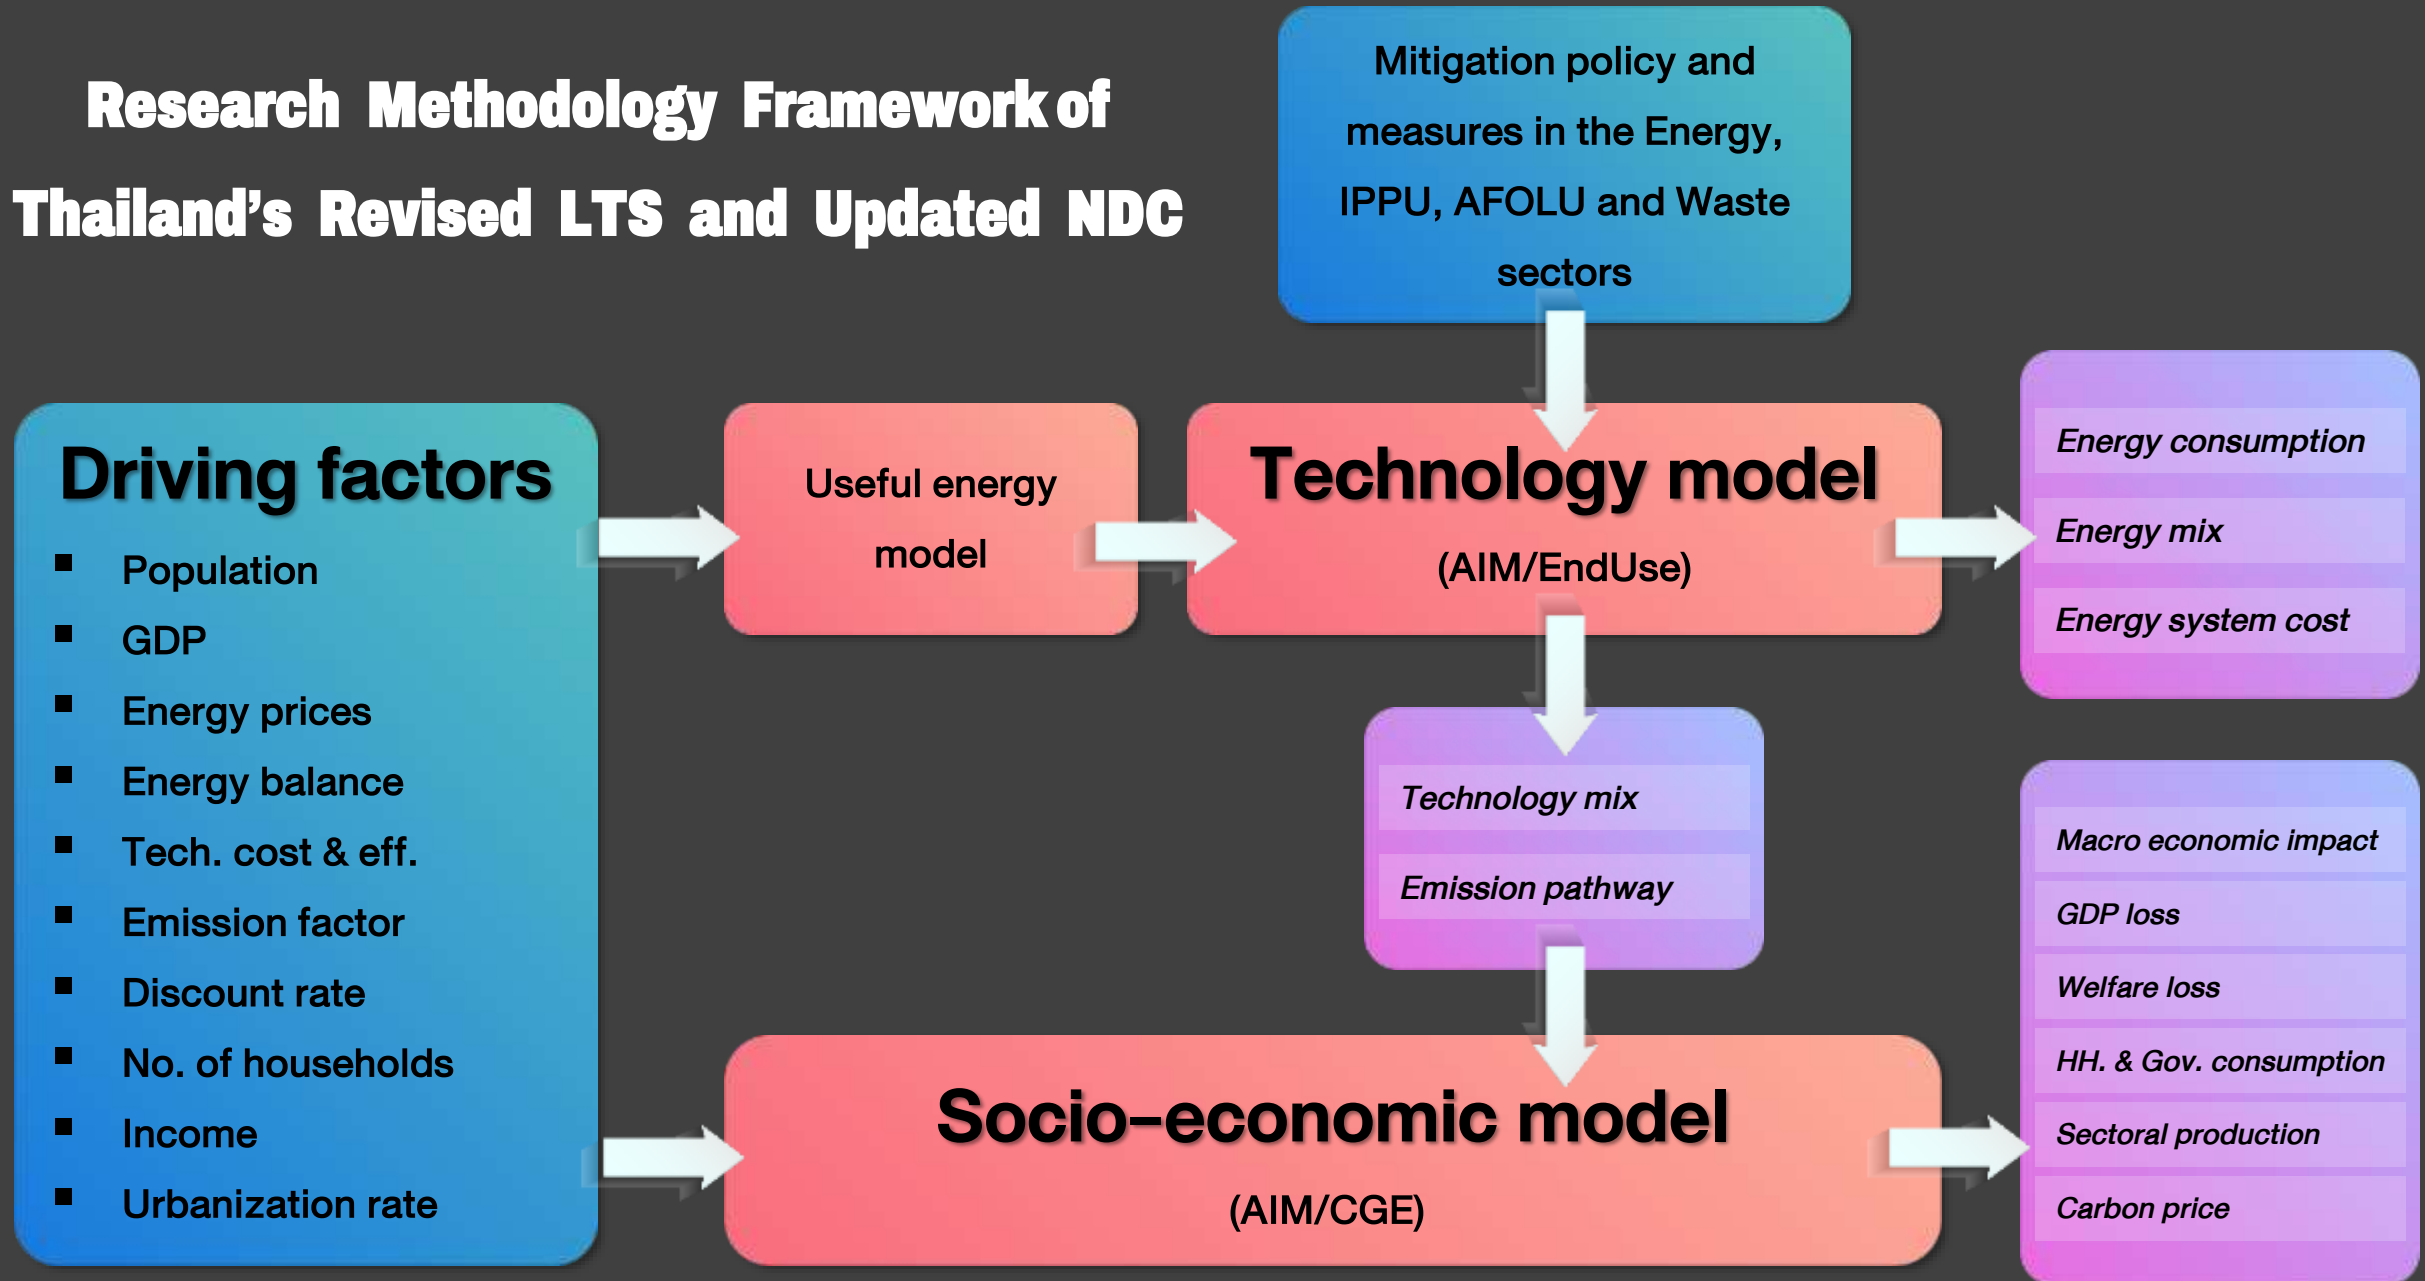

- Clinker substitution
- Replacement of refrigerants

Total GHG Reduction 222 MtCO₂eq

IPCC AR6

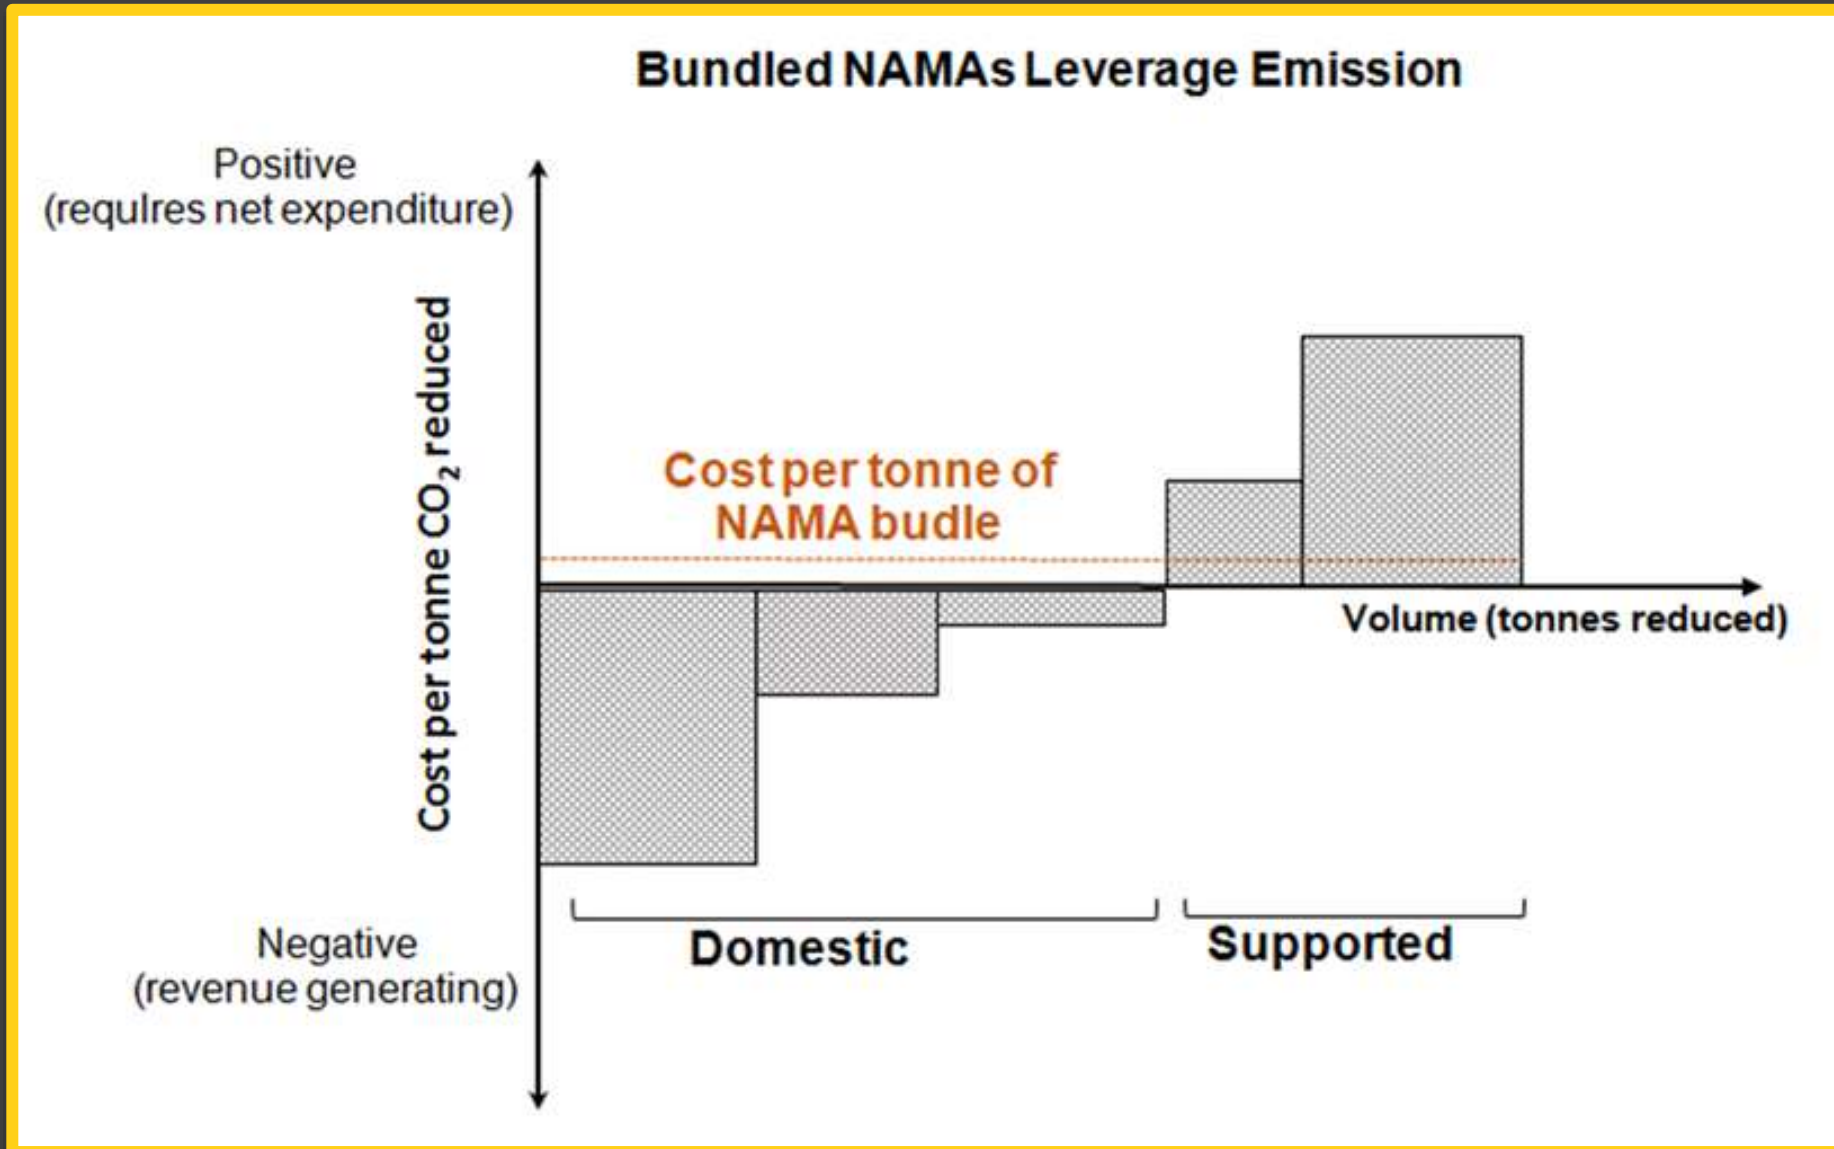

IPCC Sixth Assessment Report Global Warming Potentials

| Greenhouse Gas | 100 Year Time Period | | | 20 Year Time Period | | |
|---|----------------------|-------------|-------------|---------------------|-------------|-------------|
| | AR4 2007 | AR5 2014 | AR6 2021 | AR4 2007 | AR5 2014 | AR6 2021 |
| CO₂ | 1 | 1 | 1 | 1 | 1 | 1 |
| CH₄ fossil origin | 25 | 28 | 29.8 | 72 | 84 | 82.5 |
| CH₄ non fossil origin | | | 27.2 | | | 80.8 |
| N₂O | 298 | 265 | 273 | 289 | 264 | 273 |

Thailand's Greenhouse Gas Emission Situation in BUR4

Criteria for MAC Analysis

Many options are available now in all sectors to offer net emissions by 2030

Relative costs vary across countries and in the longer term compared to 2030

Energy

Transport

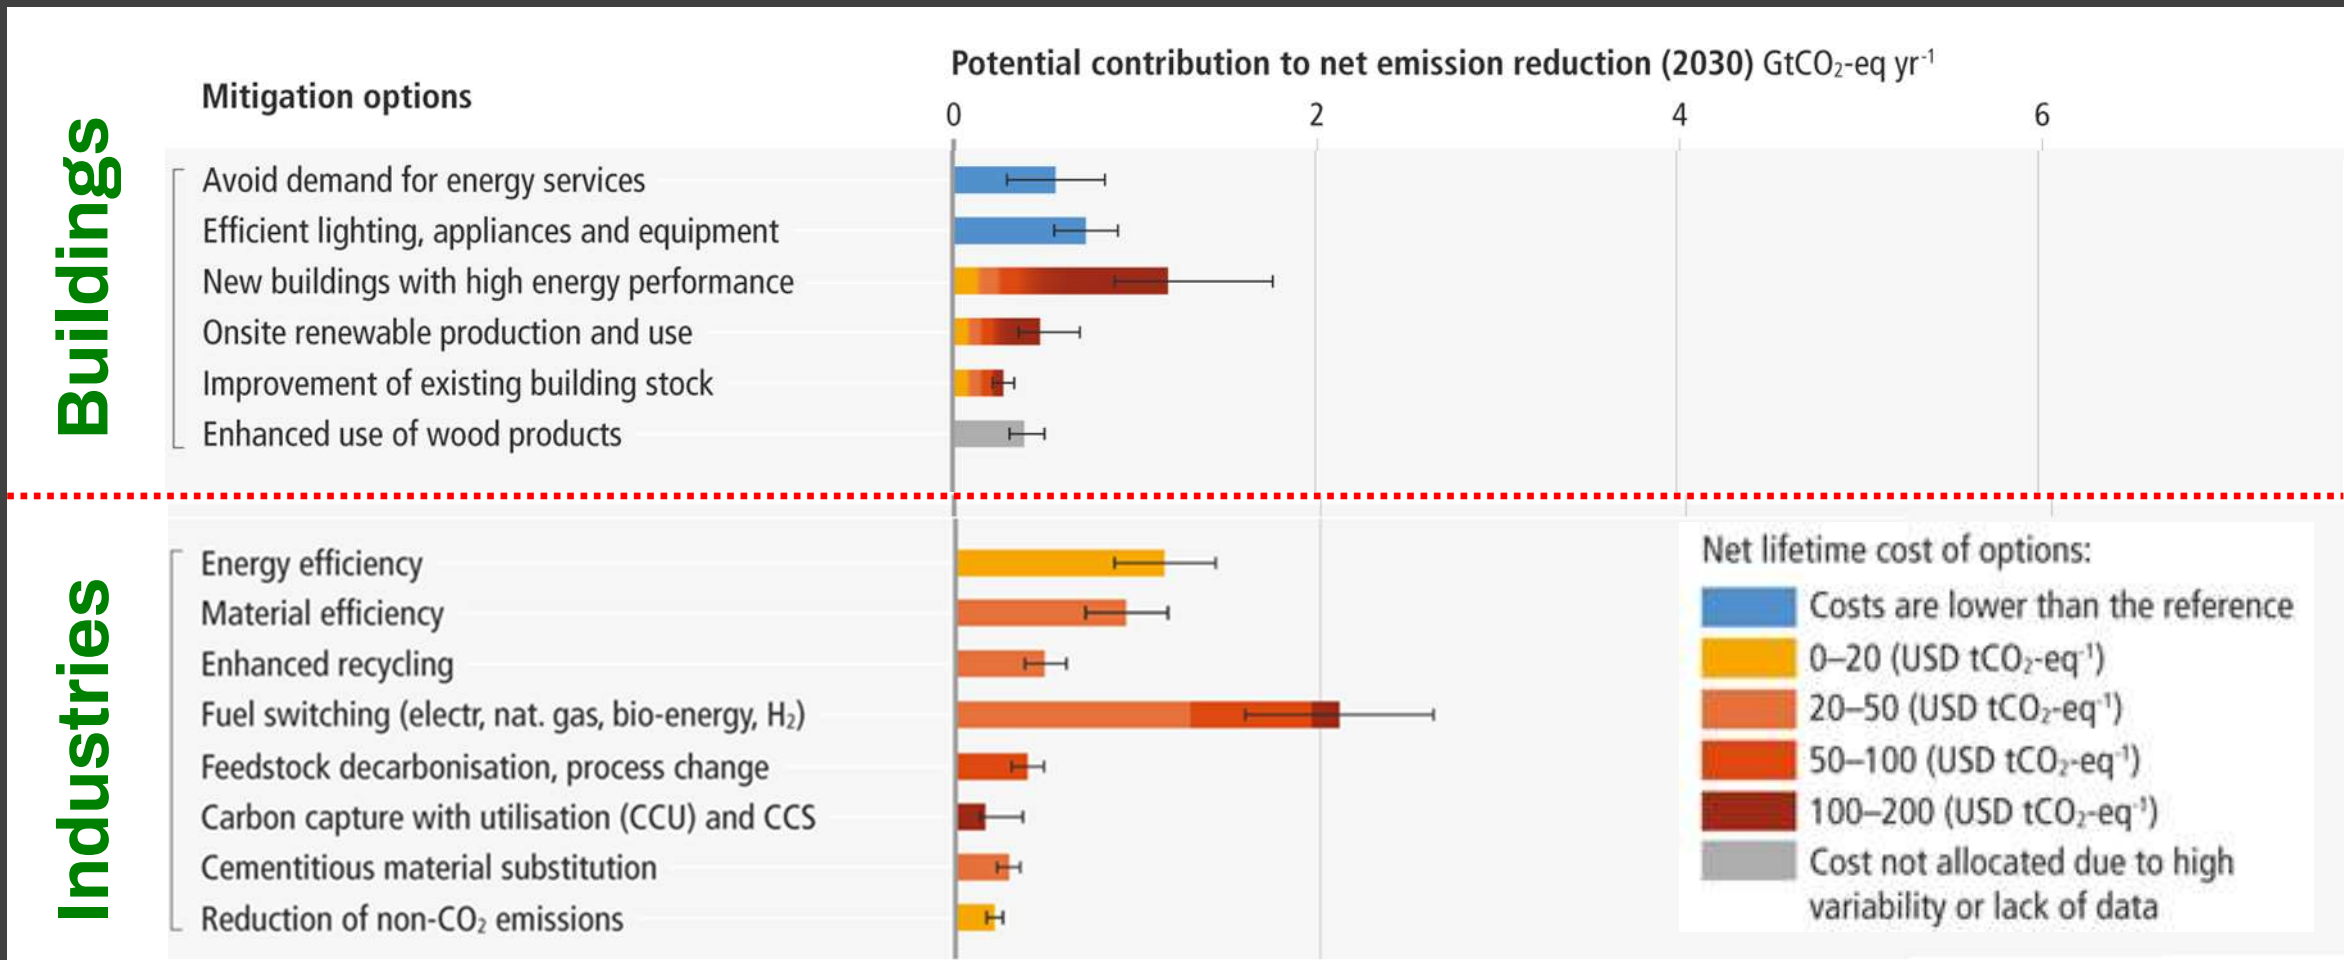

Net lifetime cost of options:

- Costs are lower than the reference
- 0–20 (USD tCO₂-eq⁻¹)
- 20–50 (USD tCO₂-eq⁻¹)
- 50–100 (USD tCO₂-eq⁻¹)
- 100–200 (USD tCO₂-eq⁻¹)
- Cost not allocated due to high variability or lack of data

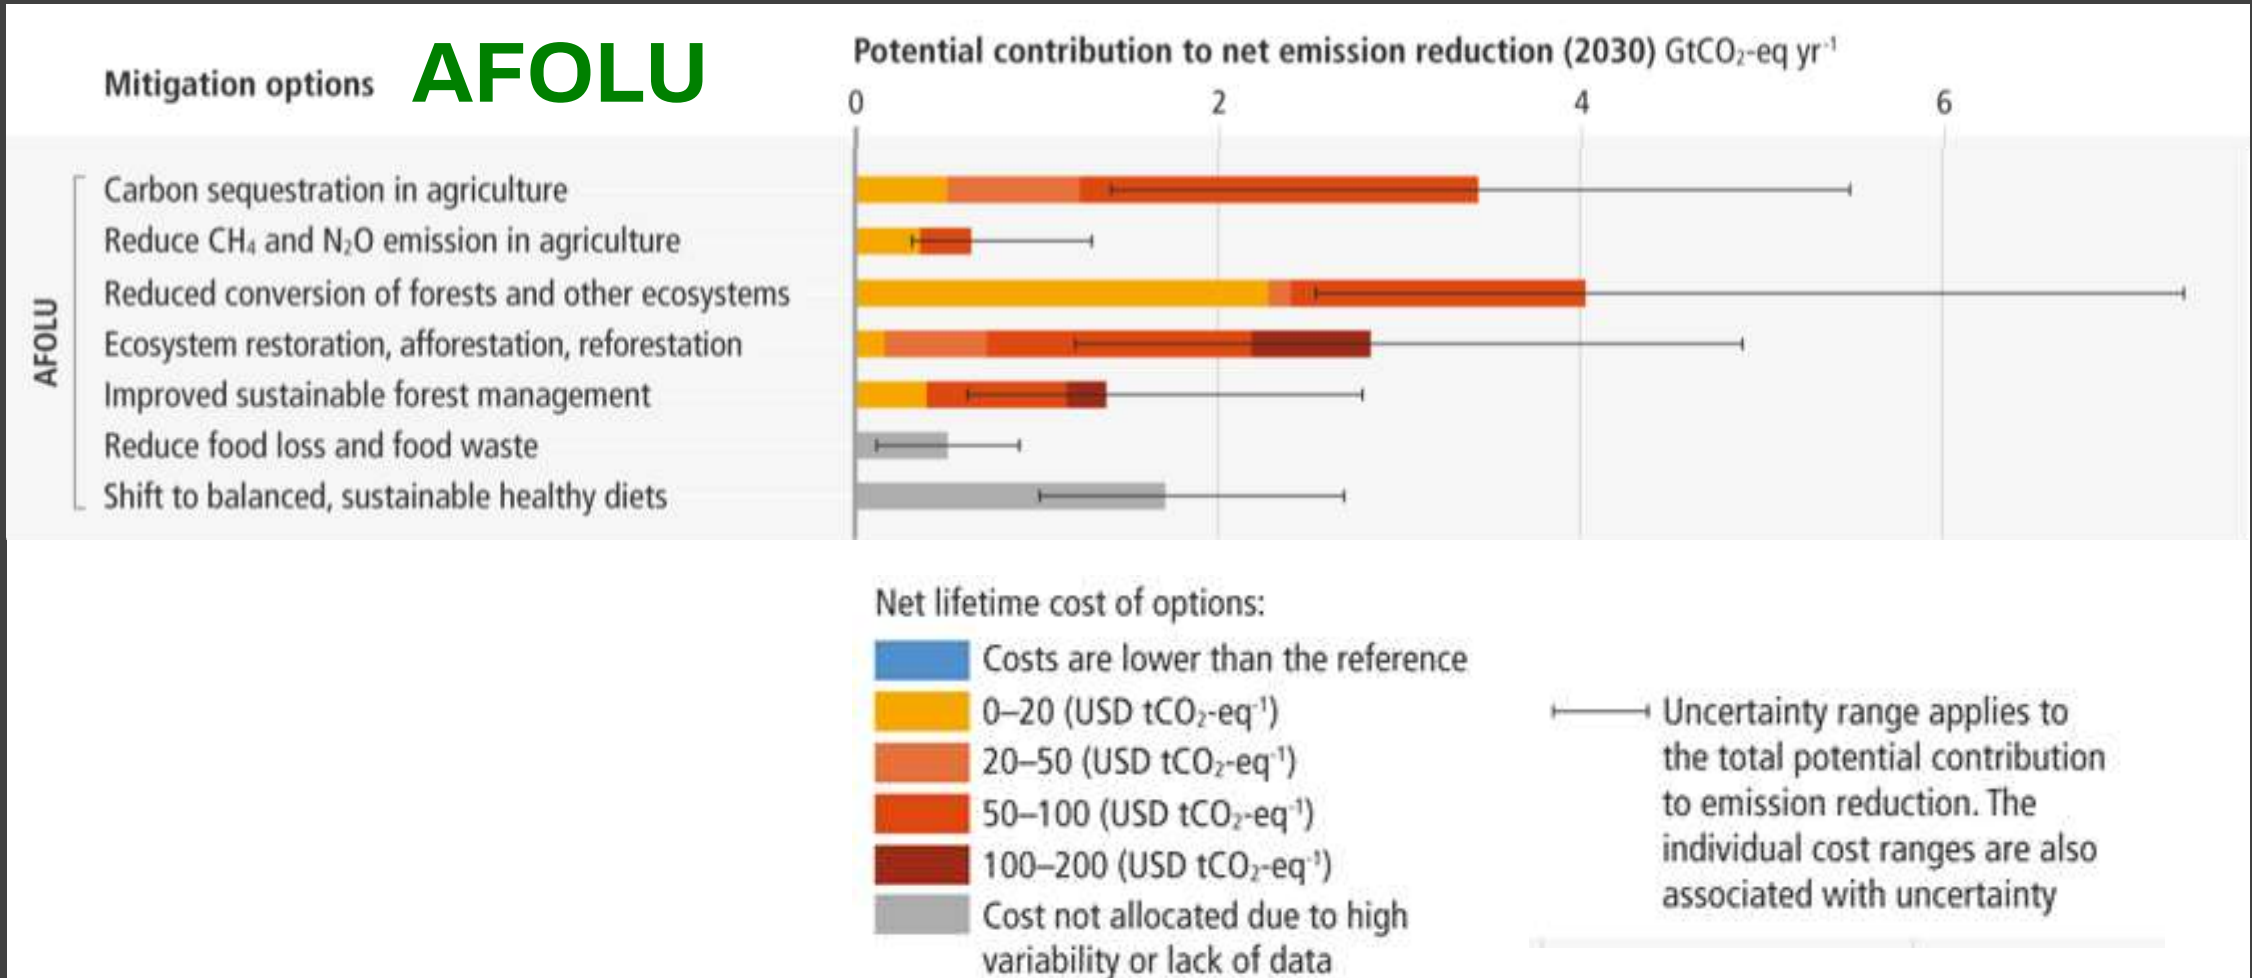

Many options are available now in all sectors to offer net emissions by 2030

Relative costs vary across countries and in the longer term compared to 2030

Many options are available now in all sectors to offer net emissions by 2030

Relative costs vary across countries and in the longer term compared to 2030

GHG Emission Levels in BAU and Updated NDC 2022

Updated NDC 2022

Solar PV in 2050 & 2065

| YEAR | 2050 | 2065 |
|--|-------------|-------------|
| Solar electricity generation (GWh) | 217,804 | 312,202 |
| PV installed capacity (GW) | 62 | 71 |
| PV land requirement (km ²) | 235 | 269 |
| PV area required (%) | 0.05 | 0.05 |

Technology Selections to Achieve Updated NDC and Thailand's Revised LTS Targets

Power Generation

- *Efficiency improvement in power plants*
- *Use of renewable energy (biomass, biogas, solar, wind)*
- *Phase out of oil power plants*

- *Phase down of coal power plants*
- *59% share of Solar and Wind*

2025

2030

2035

2040

2045

2050

2055

2060

2065

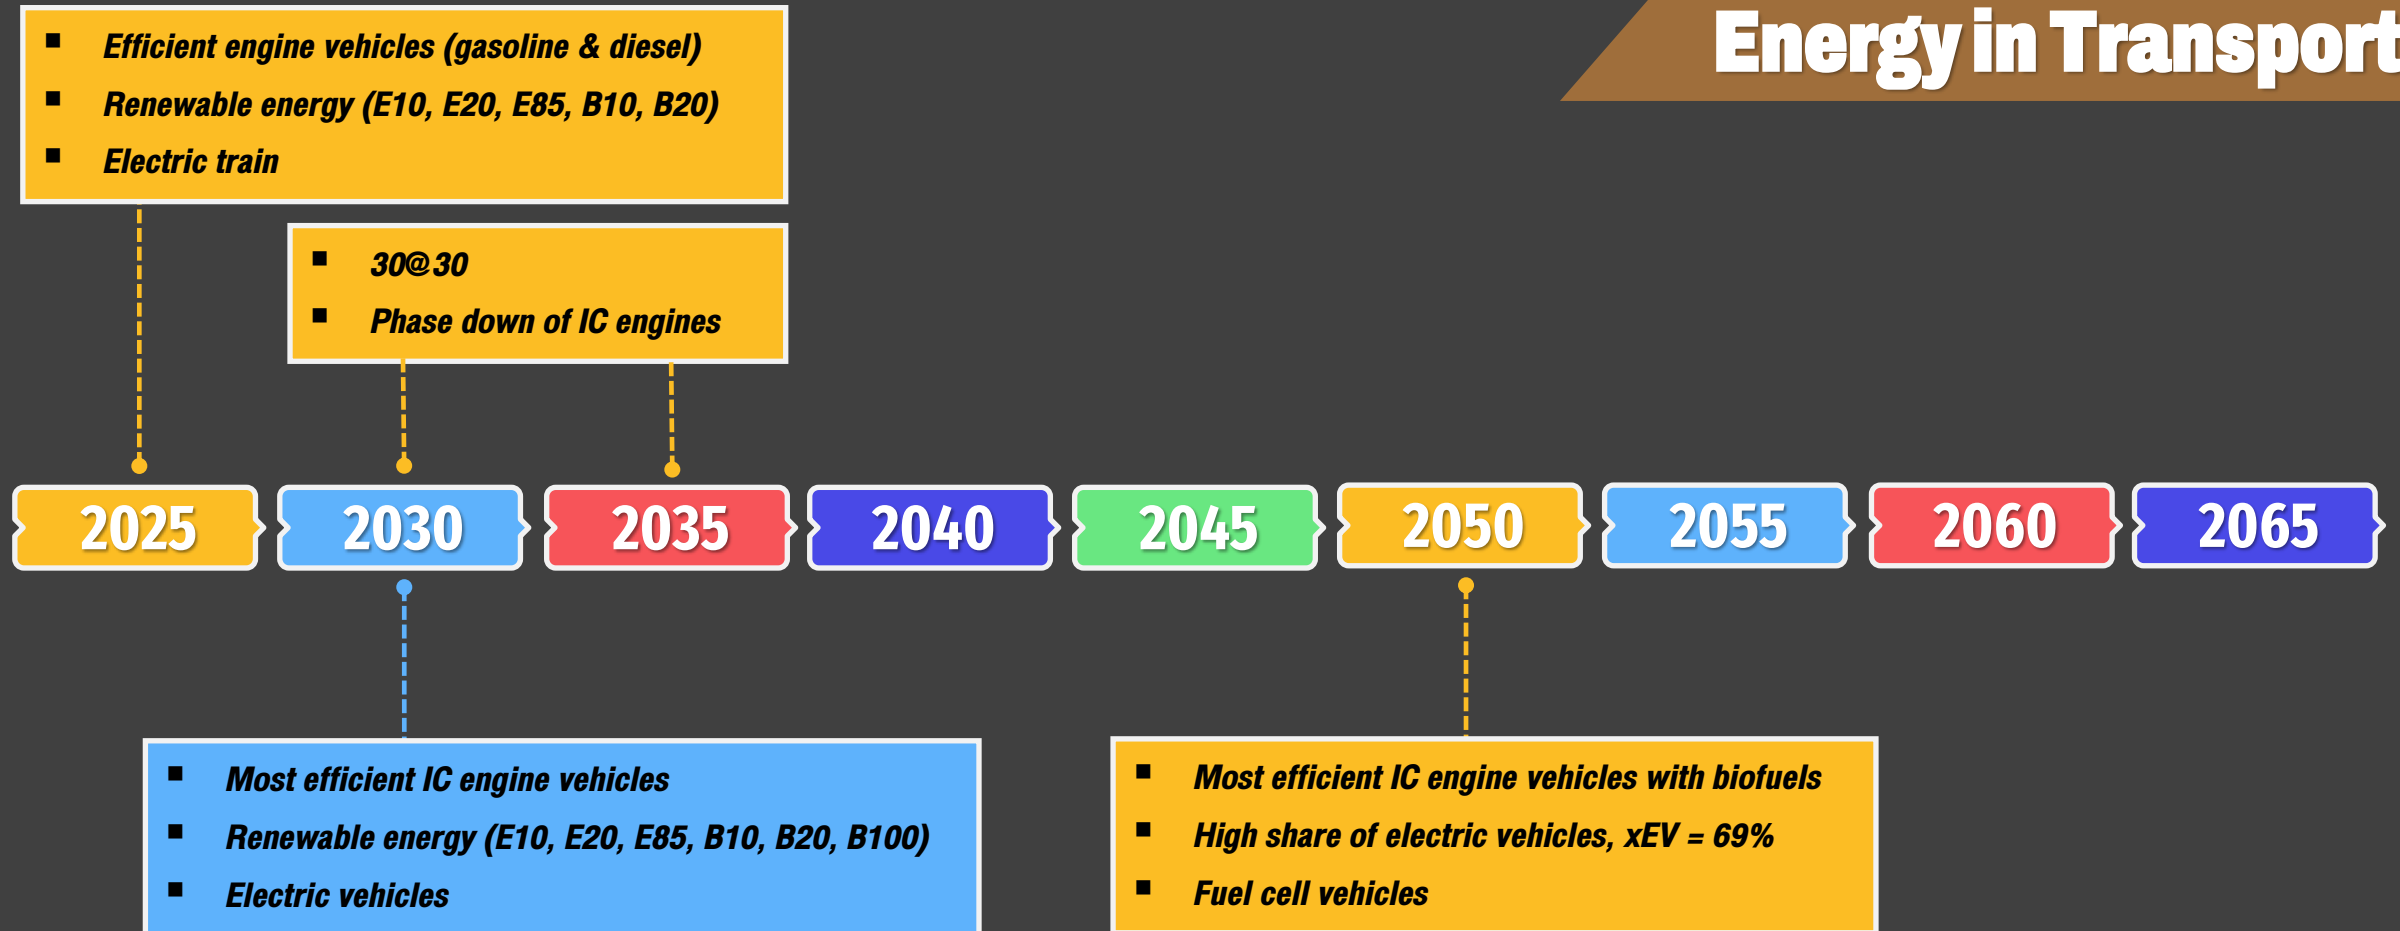

- *Solar/wind with battery storage*

- *CCS & BECCS technologies*

- *Combined cycle natural gas used best in class*
- *65% share of solar and wind power*
- *Phase out coal power plants*
- *Net zero emission electricity*
- *Biomass-based generation fully equipped with CCS technologies*

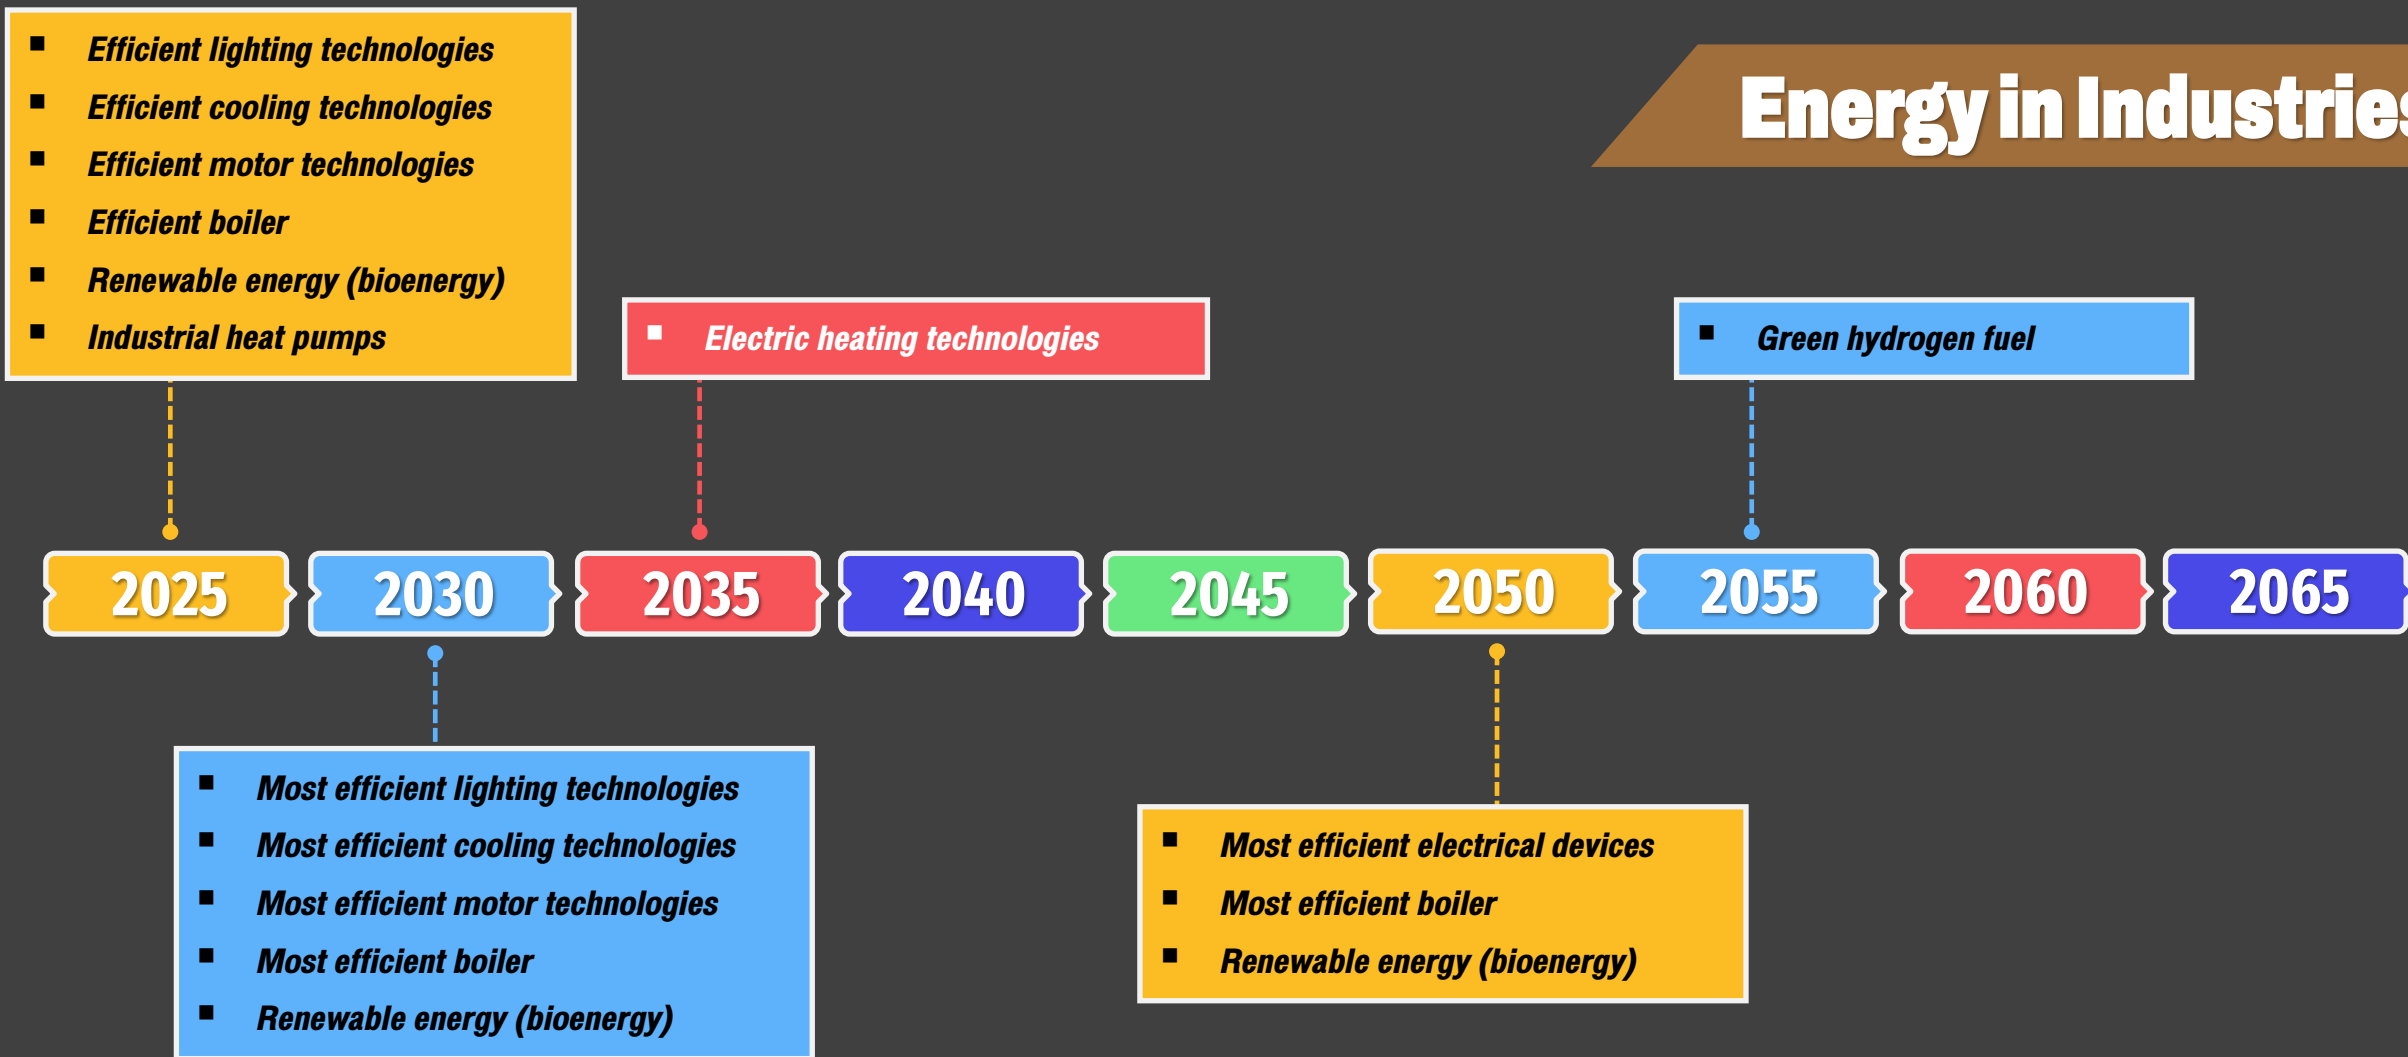

Technology Selections to Achieve Updated NDC and Thailand's Revised LTS Targets

Energy in Transport

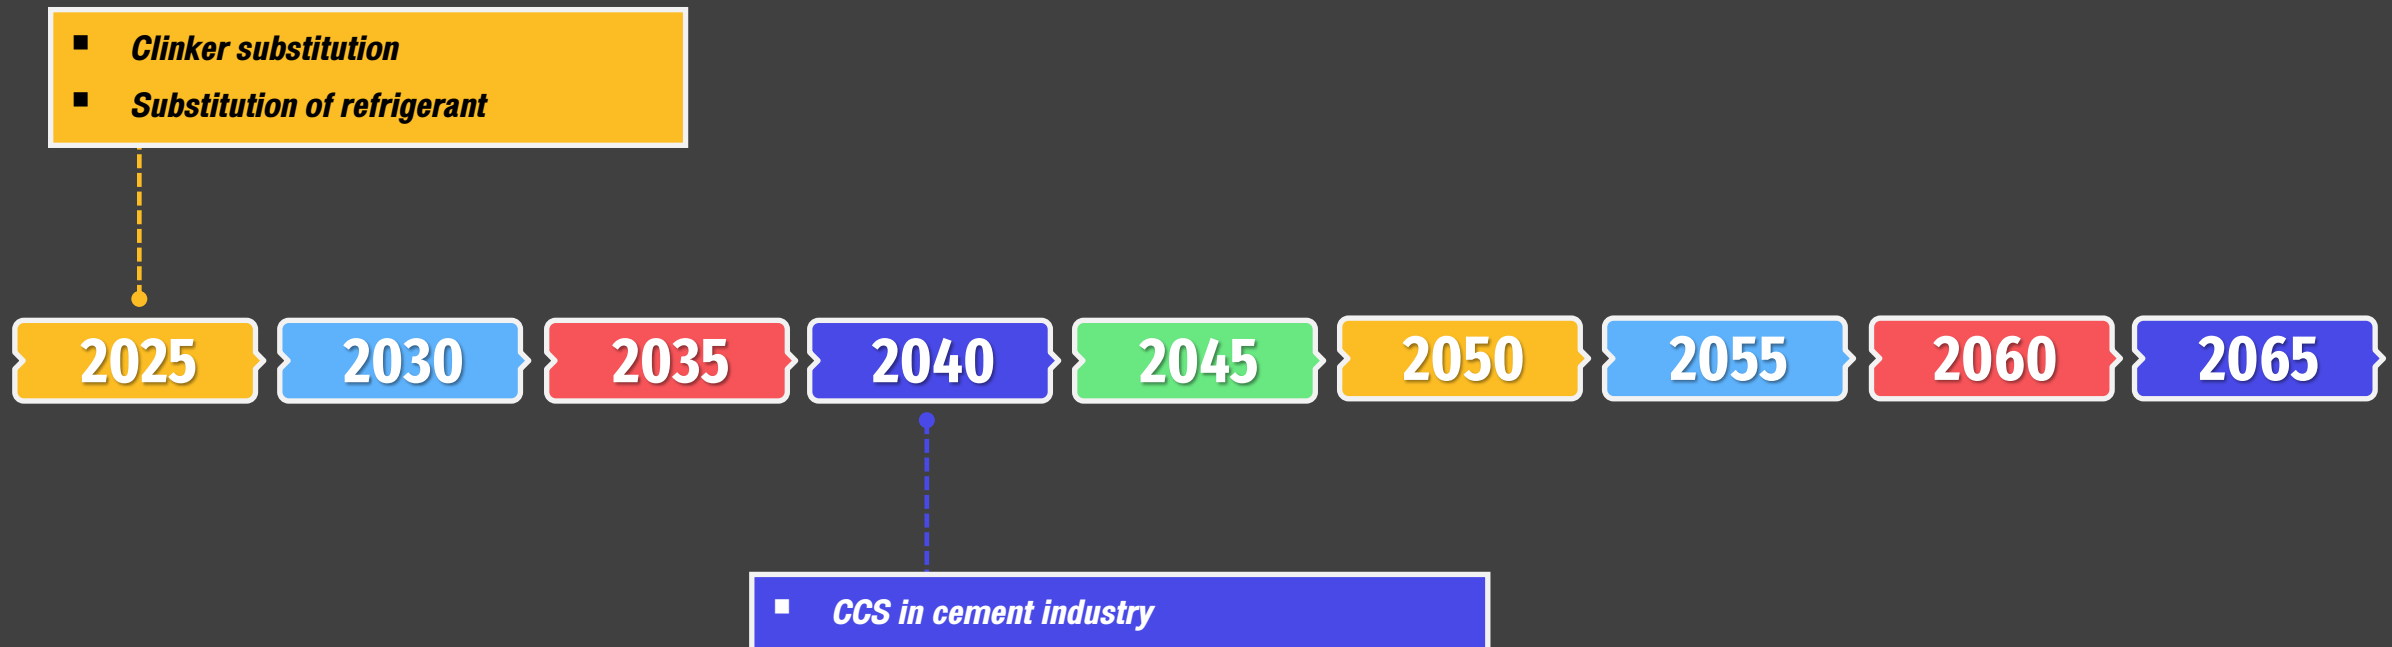

Technology Selections to Achieve Updated NDC and Thailand's Revised LTS Targets

Energy in Industries

Technology Selections to Achieve Updated NDC and Thailand's Revised LTS Targets

IPPU

Technology Selections to Achieve Updated NDC and Thailand's Revised LTS Targets

Agriculture

- **Improved rice cultivation practice**
 - Alternate wetting and drying
 - Mid-season drainage (MSD)
 - Incorporation of straw
 - Direct dry seeded rice
 - Early maturing varieties
- **Dome digester**

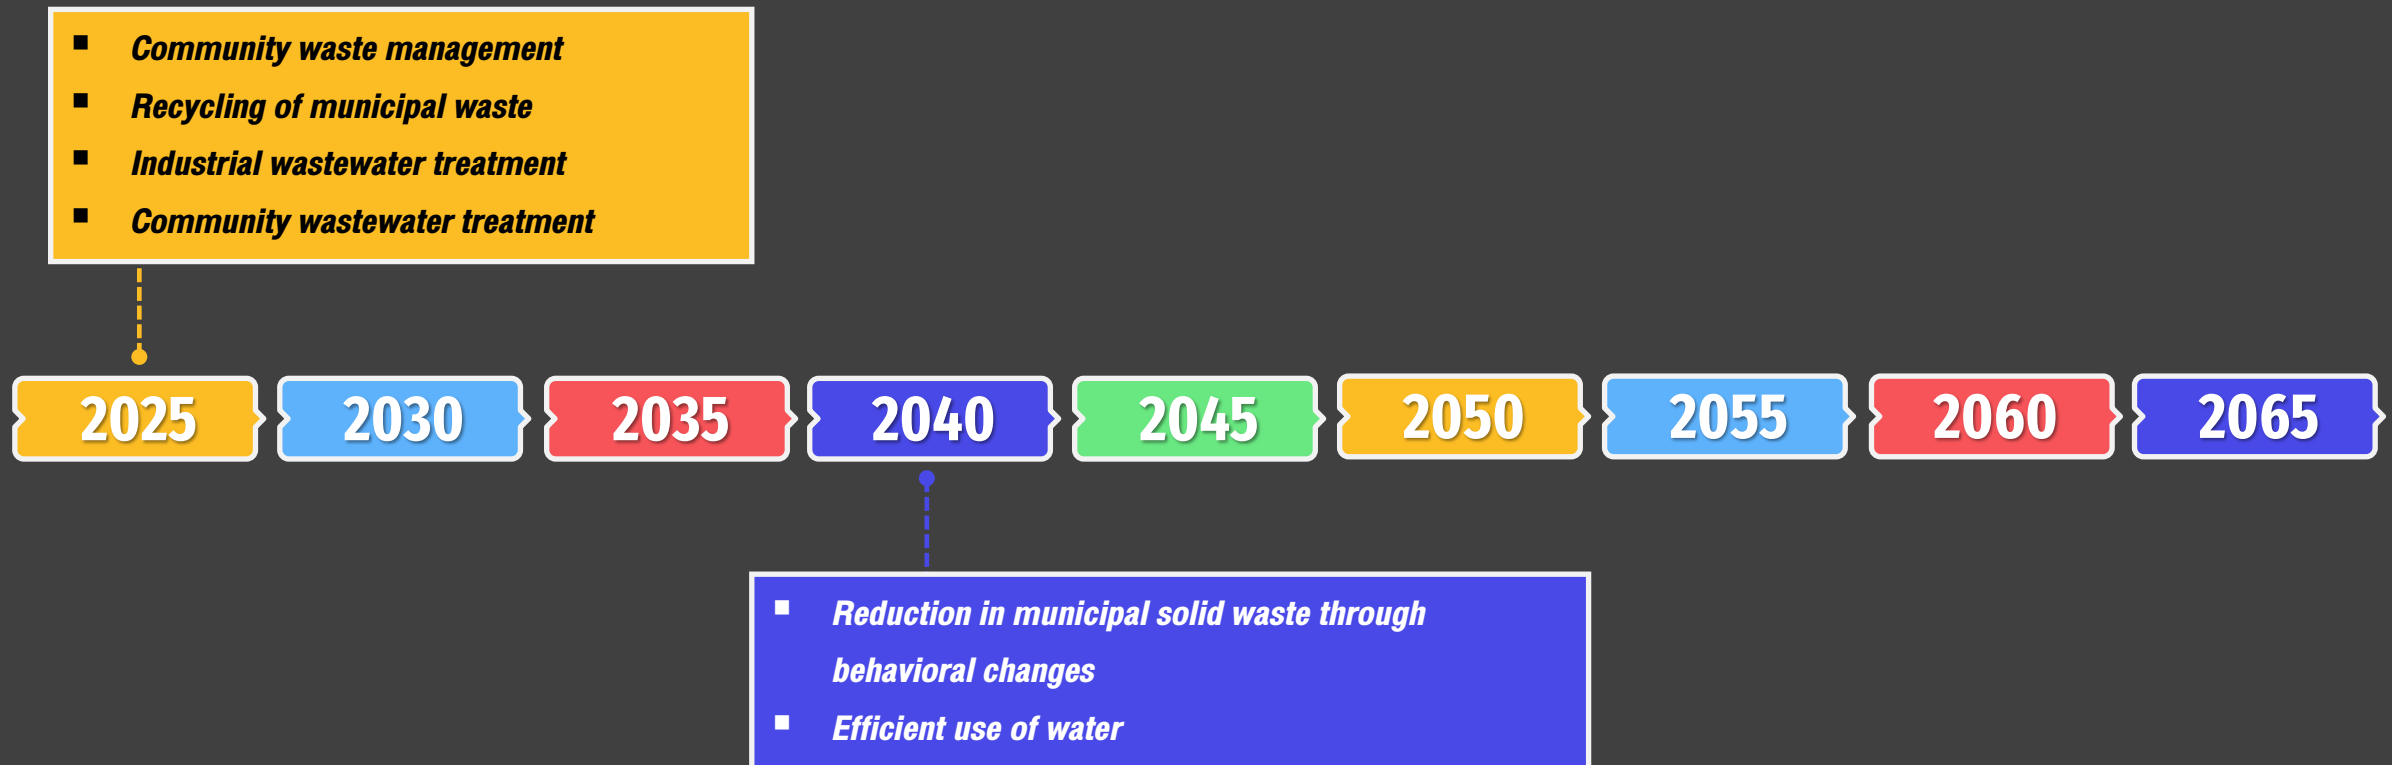

- **Lifestyle changes (change in how we eat)**

- **Improved feeds for ruminant animals**
- **High genetic merit breed selection**
- **Soil management practices**

Technology Selections to Achieve Updated NDC and Thailand's Revised LTS Targets

Waste

Macroeconomic Impacts and Cost-Benefit Analysis

Updated NDC2030

| | 25% | 30% | 40% |
|--|-------------|--------------|--------------|
| 1. GDP loss (%) | -0.3 | -0.4 | -0.5 |
| 2. Government consumption expenditure (%) | 7.5 | 8.3 | 10.6 |
| 3. Welfare loss (%) | -2.1 | -2.4 | -3.0 |
| 4. Carbon prices (Baht/tCO₂eq) | 739 | 1,060 | 1,766 |

Conclusion

- **AIM models can be used for policy analysis**
 - **Projection of local emission and impacts using AIM models**
 - **Analysis of climate policies and local air pollutants**
 - **Co-benefit analysis**
 - **Marginal abatement cost**
 - **Carbon tax policies, etc.**
- **Opportunities for young researchers to write research paper using AIM family of models as analytical tools.**

THANK YOU
